

Injectables at Blessings International

Blessings International does not purchase any specially-compounded medications from any source.

Our injectables are labeled with the notation “single dose vial (SDV)” or “multi-dose vial (MDV)” on the order sheet, so teams can order appropriately for their situation/use.

The CDC has come out with a statement confirming that SDVs should NOT be used for multiple injections/multiple patients, as the SDVs do not contain a preservative to prevent or retard contamination. Blessings recommends that teams using its products follow CDC guidelines.

Please let us know if we can assist you in any way!
